

Priorities	Status Indicators:	Expectation	Goal Type
Essential	DONE	Certain	Confirmed Dapper goal
High	On track, all OK	Probable	Considered Dapper Goal
Medium	Slightly behind schedule	Unlikely	Not guaranteed for Dapper
Low	Blocked / needs mgmt input	Deferred	

Prio.	Was	Now	Name	Assign	Days	Dapper Development Status Update: 23 March 2006
ajmitch						Not present – goal deferred.
Medium	Deferred	Deferred	selinux	ajmitch	?	Added as a Dapper goal. Was: Due to working away from home at the moment, the SELinux work is progressing slowly & is unlikely to be ready by feature freeze. Policy packaging is being done with Debian people now, and a patch to remove unneeded messages from sysvinit will be forthcoming in the next couple of days, so that selinux support in sysvinit can be turned on again. Deferred.
Meeting:						None listed.
BenC						
High	Implemented	Implemented	kernel-roadmap-dapper	ben-collins		Informational overview spec. Implemented. Bugs have mostly been caught up with.
High	Implemented	Implemented	newer-hotplug-subsystem	ben-collins		Informational overview spec. Implemented.
Proposed	Implemented	Implemented	community-server-hardware-testing	ben-collins	?	Pretty much implemented. Announcement was sent out. Note from mdz: the remainder of server-hardware-testing is to collect information from the community on which hardware they are testing, and track test results through the release cycle, so that should be ongoing
Medium	Implemented	Implemented	ubuntu-server-kernel	ben-collins	1	Implemented.
Medium	Implemented	Implemented	preventing-hardware-support-regr...	ben-collins	3	Implemented. Note from mdz: apart from daily builds, preventing-hardware-support-regressions had some other components, like calling on users to test, that should be marked as in progress until all of the steps are complete.
General			General	BenC		Dapper Kernel Status: - Bugs are continuing to be the major workload. Think I'm finally in a workflow to where I can keep up with them. - This week IBM initiated our server kernels into the ABAT (Automated Build And Test) system. They will be doing regular build, boot, stress, LTP (Linux Test Project) runs of our -server, -server-bigiron, -amd64-server and -powerpc64-smp (pseries) kernels. - Major updates to the kernel include: ipw2200 1.1.1 + patches, should make a lot of people happy. ipw3945 will be included in the next upload.
Meeting:						None listed.
daniels						Not present – spec implemented.
High	Implemented	Implemented	x-roadmap	daniels	35	Implemented.
General			General	daniels		
Meeting:						None listed.
dholbach						
High	Implemented	Implemented	best-practices-bugs	dholbach		Implemented.
High	Implemented	Implemented	test-plans	dholbach		Implemented.
Low	Implemented	Implemented	inclusion-of-docs	dholbach		Implemented.
General			General	dholbach		icon-mission: basic workflow with art team implemented, needs announce, one feature in icon page missing this week (done): started catching up on bug triage (~2900 -> 1900 unread desktop bugs mails), random fixes this week (todo): more bug triage, bugsquad announce, bug day announce next week: bug day, bug triage, bugsquad meeting (monday, 15 utc)
Meeting:						None listed.
doko						
Proposed	Informational	Informational	openoffice	doko		Was: results from the OOo sprint last weekend in the archive (closed about 120 reports for things fixed in 2.0.2, fixed another 15 at the weekend or later), more complete report today to ubuntu-devel. Now: sprint notes at https://lists.ubuntu.com/archives/ubuntu-devel/2006-March/016568.html , packaging fixes, splitting help pot files, new locale. outstanding: two crashes (atk is currently addressed upstream).

High	Implemented	Implemented	openoffice-gnome	doko	?	Was:gnome-file-selector (needs more fixes -> martink, next week). Now: 2.0.2 release announced today, -10n package uploaded, other packages will follow after flight-5
Medium	Implemented	Implemented	toolchain-roadmap	doko	28	final versions in the archives for all architectures (v8 on sparc), java problems on hppa (not that critical for main), lamont not yet happy, infinity starts feeling better.
Medium	Approved	Started	python-roadmap	doko	10	Was: : final gcj-4.1.0, then only change this week an update to current CVS leading to 2.4.3, plus bug fixes. No Update given.
Low	Deferred	Deferred	java-roadmap	doko	33	Was: native-gcj: gij/gcj-4.1 update, eclipse update, some package rebuilds. implemented, without -doc packages (API documentation) – what can be implemented has been (Ooo requirements) , the rest is deferred. Now: java problems on hppa fixed, glibc could use a patch comparison (unstable vs. dapper, hint, hint jbailey)
General			General	doko		- toolchain-roadmap-ng: blocked - other: working on bugs (OOo, assigned, java, started python), finally eclipse-pydev!, building eclipse on sparc, tracking ttf-dejavu font changes, everything else I forgot
Meeting:						Discussion required between doko and jbailey re glibc patches.
fabbione						
High	Implemented	Implemented	server-candy	ubuntu-server	30	All code has been done. Note that this goal is considered Implemented for Dapper. Remaining pieces deferred to Dapper+1. added LAMP install target to server CD. Missing/buggy: apache2 for "central snakeoil SSL setup" and kernel -server as default from CD install. Added rc.local support on mdz/sabdfll request.
Medium	Implemented	Implemented	boot-from-usb	fabbione	5	Implemented.
Medium	Implemented	Implemented	installer-volume-management	fabbione	2	Implemented. There is one (minor corner case) bug that is giving me headache to fix. Otherwise it ROCKS.
Medium	Implemented	Implemented	ubuntu-cluster	fabbione	15	Note that this goal is considered Implemented for Dapper. Remaining pieces deferred to Dapper+1. OCFS2 kernel update and several hours stress test on upstream request. Waiting their release for new userland to sync with the kernel that will allow (finally) full desync later. Release is taking a bit longer. Today I received a SAN to use for cluster testing. Somebody please send/donate a portable nuclear power plant and a set of ear plugs.
General			General	fabbione		* last week: Tons of X bug fixing/triage/headaches/larting/bashing/killing/... and a bit of sparc bug fixing. Got around the first step of hw upgrade at the office. Added a SUN T2000 to the machine collection. * next week: complete hw upgrade at the office, bug fixing.
Meeting:						None listed.
heno						
High	Implemented	Implemented	example-content	henrik		Not present – goal implemented. Implemented. I've now set all the filetypes to 'Selected' status, which means what is there can ship, but if something better comes along we can/should switch. Looking at the original spec, the filetypes mentioned there have been assembled, but the second section which describes integration with various apps, like evolution, has not been done. We decided that we didn't want to mess with user profiles at this point, but might try it for dapper+1 after more discussion. So in that sense we might consider the spec as partially implemented, partially deferred (as of later today when I upload a new tarball). Now: implemented. Some updates and tweaks to individual files will continue to be made. mdzzz.ogg is no longer the default video :-), now has a recorded desktop session
General			General	heno		
Meeting:						None listed.
infinity						
High	Implemented	Implemented	reducing-duplication	adconrad		Although this goal has an on-going component, for reprting purposes it is considered Implemented.
Medium	Implemented	Implemented	usplash-intramfs	adconrad	2	Implemented.
Medium	Implemented	Implemented	splash-down	adconrad	7	A few bugs will need to be ironed out (some text flicker, and making sure we survive for the last few seconds of the shutdown), but it's pretty much working as-is. Implemented.
Medium	Implemented	Implemented	intramfs-updates	adconrad		Implemented.
Low	Implemented	Implemented	thinclient-usplash	adconrad	4	Implemented.

General			General	infinity		<p>last week build: had some productive sessions with cprov, where nearly a dozen irritating bugs were nailed in the build code, brought hppa completely up-to-date, chased more build failures.</p> <p>last week distro: uploaded a mess of packages to resolve FTBFS issues, did some new upstream merges, started hammering away at the initscripts-tools bug list.</p> <p>next week build: keep an eye on buildability and installability of main, tweak some more bugs in the build slave code that I can do without cprov's assistance, and start filing bugs on failures in universe.</p> <p>next week distro: more bug triaging and fixing in initscripts-tools, and (hopefully) a UVF exception and mass rebuild for a new MySQL that (sadly) broke ABI upstream, plus whatever else I have time for.</p> <p>GENERAL NOTE: You may all have noticed a flurry of uploads from me in the last week to deal with build failures. Some of you (hi mvo) may prefer if I push those fixes directly to you. If I step on toes, please let me know.</p>
Meeting:						None listed.
iwj/Diziet						
High	Implemented	Implemented	automated-testing	ijackson	10	Implemented. Working on setting up Xen-based virtualisation for running tests in (for safe deployment on one of my systems here, and proof of concept for datacentre arrangements). Defeated: Xen host, grub, mad bridge stuff. Battling: lvm2. To come: pbuilder, autopkgtest changes/improvements. New package name `autopkgtest' is everywhere; old name to be deleted RSN. now: A few discussions with Xen people but otherwise no real progress so far this week.
High	Implemented	Implemented	default-applications-firefox	ijackson	10	Implemented. There has been some feedback from the `you have chosen to open ...' suppression. epiphany and galeon need to disable the change which I made by default in gecko; seb128 will be sending a mail about this. Now: Reverted `you have chosen to open ...' before I went away. No complaints from that. So I think we can call this goal complete.
Medium	Approved	Started	developer-documentation	ijackson	15	Was:Editing work in progress (slow). Now: no progress to report.
Low	Deferred	Deferred	package-dependency-fix	ijackson	10	As per mdz deferred; as we don't want to make intrusive changes to the packaging toolchain for dapper
General			General	iwj		<p>Firefox maintenance: Thanks to mvo, seb128, doko, fabbione for stuff while I was away. I'll do an upload tonight (ugh, it's still building, again) or tomorrow which should fix a few things I'm aware of, provide -dbg package, etc.</p> <p>Bugfixing: managed to get around to gs-gpl ia64 init.ps problem; very mysterious but now gone it seems. Will look at other gs bugs if I get a chance tomorrow.</p> <p>Email/lists: caught up (it was that or do three weeks in one go later).</p> <p>Email: I'm getting _lots_ of spam via my Ubuntu addresses. Is Anything being Done ?</p> <p>Last week and next week: on holiday.</p>
Meeting:						None listed.
jbailey						
General			General	jbailey		Not present – not required
Meeting:						Discussion required between doko and jbailey re glibc patches.
kamion						
Essential	Informational	Good progress	ubuntu-express	kamion	?	Informational overview spec. Internationalisation support on its way, now that I've implemented the escape capability in debconf. We pretty much have internationalisation now, apart from a few glitchy strings. The POT file is in Rosetta and is being translated.
Essential	Approved	Started	ue-partitioning-tool	kamion	8	Was: Partitioning committal moved to the main installation progress bar. Some gparted bugs are currently blocking me from testing part of this properly, though. About 65% done ; gparted improved quite a bit, partitioning commit moved to main progress bar, partman disk selector done, working on espresso integration of disk selector now Now: Various gparted bugs fixed, thanks to Daniel. Landed and integrated Fabio's disk selector.
Essential	Approved	Started	ubuntu-express-base-system	kamion	8	Was: About 80% done ; Tollef still working on keymap support, reporting "nearly there" Now: Keymap page done. Really just apt-setup to go here now.
Essential	Approved	Good progress	ubuntu-express-copy-filesystem	kamion	3	Was: Uploaded live-only package removal code; still blocked on manifest from build. 95% done ; still waiting for desktop manifest from build, and still need to copy network configuration 95% done ; still need to copy network configuration
Essential	Approved	Beta Available	ubuntu-express-bootloader	kamion	2	Was: Basically implemented now, although needs testing of espresso-yaboot since my powerpc system's CD drive is too broken for me to test it myself. 95% done ; yaboot support just needs testing and then this will be done Now: 95% done ; still need testing of yaboot support from powerpc users, but this is blocked on making keymap support work well enough for them that they can get that far
Essential	Approved	Started	ue-gnome-ui	kamion	15	Was: identification page totally reworked; several other small UI changes. About 75% done ; again, some progress since last week, but another bunch of stuff got added during my second visit to the UI sprint Now: Daniel did the breadcrumbs rearrangement; yay.
Essential	Implemented	Implemented	ue-language-packs	kamion	3	Implemented. 100% done

Medium	Implemented	Implemented	cd-build-process	kamion	2	Implemented. (If we desperately need to get install+live ISO build time down beyond the current 20 minutes, I can backport changes from Debian that eliminate the apt-ftarchive bottleneck, but that will take some work.)
Medium	Implemented	Implemented	cd-bootloader	kamion	5	Implemented.
General			General	kamion		misc: Looked into Intel Mac CD images and experimented a bit via mjpg59; we think we need HFS+ support in mkisofs to get this working (it already has HFS support, so this should be a smallish step). Worked with Carlos to get aggregated installer translations into Rosetta. Promoted most of Xubuntu to main. Out of date on UVF exception requests; sorry, will try to catch up there. Almost entirely up-to-date on other arch next-week: Timezone->country->locale inferring. Finally sort out network configuration. Figure out what's up with the bogus copying time.
Meeting:						Discussion required between mvo and Kamion re: the debconf/gnome thing,
keybuk						
High	Implemented	Implemented	hardware-activation	keybuk	5	Implemented.
High	Implemented	Implemented	udev-roadmap	keybuk	14	Implemented. (happy with the udev version, newer versions include support for kernels 2.6.16 and post but we're not shipping those.) some minor bugs fixed, including one that affected Installer. Now: many changes to the way we do root filesystem mounting this week; the new stuff is rather more streamlined and means we can do mount-by-uuid (ProbeForRootFilesystem) on everything except evms, LVM and md/RAID now.
High	Implemented	Implemented	network-magic	keybuk	20	Implemented. Changes to network manager done, and it's been moved to main; My inclination is to install by default on the LiveCD but not on in desktop One of the most common Network Manager "bugs" is people complaining that it doesn't detect their network card; in reality this is because they've got some hard-coded essid or something in /etc/network/interfaces so n-m just doesn't touch it. Unfortunately the "failure mode" is to simply pretend the interface doesn't exist. I've spent a few days trying to make this better, and not having much luck -- n-m is built on the premise that it can control every interface it knows about; trying to bolt on "interfaces I know about but can't touch" is hard -- especially given how much dbus is involved! have been investigating 0.6 and would like to recommend that we look at shipping that in dapper, along with wpa_supplicant -- with the extended release cycle it would still get more testing than I was expecting 0.5 to get. It also fixes a lot of damned irritating problems. Now: been going through NM 0.6 and it's new dependencies, using the community contributions where possible. both dependencies are in the archive now, and approved for main by pittti (not going to seed them as n-m will drag them in automatically). should get n-m in before I go away
High	Implemented	Implemented	hardware-detection	keybuk		Implemented.
Medium	Implemented	Implemented	streamlined-boot	keybuk	10	Implemented.
Low	Implemented	Implemented	urgent-reboot-notification	keybuk		Implemented.
General			General	keybuk		wpa_supplicant - have further changes I want to make to it, will involve syncing with Debian with a UVF exception. make it integrate properly with ifupdown with a process-per-interface and config from /e/n/i rather than running as a daemon all the time. other: finished off multi-arch report (at least, no further comments from mdz on it). still not received reply to request to be added to ftp admin group. had not much time for installer UI yet, sorry Kamion, nm taking a bit longer to work out amongst other interruptions.
Meeting:						None listed.
Kinnison						
High	Implemented	Implemented	power-management-configuration	dsilvers	?	Implemented - I have integrated a lot of upstream changes and I have gotten upstream to take on a significant portion of the changes I made locally. Upstream continues to take an active interest in taking on our patches and helping with our bugs. gnome-power-manager (PowerManagementInterface): Been through ca. 100 bugmails learning the new state of the world post-lp-sprint. Begun the work to get 2.14.0 (plus some CVS patches) into the archive. gparted: Worked through the installer-mode patch to ensure all dialogs are transient on the plug if appropriate metacity: Added a patch to ensure transience on a non-toplevel works. This is a workaround in the sense that transience is meant to always be on a toplevel, but this is by far and away the easiest place to add this code. vim: re-enabled the vim-ruby package as per bug 36050 aspell-sl: Investigated report that the package is uninstalleable. Could not reproduce, asked for more info. launchpad: Fixed bug in binary upload acceptance, continued discussion with the sabdfi about domination in personal package archives. espresso: replaced breadcrumbs with N-of-M in the GTK UI tomorrow: Assist in production rollout otherwise: Continue to do gnome-power-manager work; we are now going to seriously diverge from upstream as upstream is on the road to 2.16. Continue to pick up espresso UI work for Colin. Whatever else falls onto my plate bugs: Currently I have around 50 bugs I am actively dealing with, most are g-p-m, some are acpid or acpi-support related. This is up on last time due to spending time on gparted and espresso for colin and then having a week on the launchpad sprint. I currently have another 46 bug mails to deal with in my LPBugs folder.
General			General	dsilvers		

Meeting:						None listed.
krstic						Not present, goal deferred.
Proposed	Deferred	Deferred	hardware-testing-catalog	krstic	?	split off as hardware-testing-catalogue mdy & BenC are handing community-server-hardware-testing etc. This goal is deferred to Dapper+1.
Meeting:						None listed.
lathiat						Not present – goal deferred.
High	Deferred	Deferred	zeroconf	lathiat	?	As per mdz this goal is deferred, as we have unresolved issues and it's too late to do much about it.
Meeting:						
mdz						
Essential	Implemented	Implemented	dapper-release-process	mdz		Implemented.
Meeting:						None listed.
Mithrandir						
High	Implemented	Implemented	media-integrity-check	tfheen	2	Implemented.
High	Deferred	Deferred	network-authentication	tfheen	30	Note from mdz: let's defer network-authentication officially from dapper goals.
High	Implemented	Implemented	simplified-livecd	tfheen	?	Implemented.
Medium	Implemented	Implemented	probe-for-root-filesystem	tfheen	10	Implemented.
Medium	Implemented	Implemented	live-cd-performance	tfheen	?	Implemented.
Medium	Implemented	Implemented	livecd-unionfs	tfheen	1	Implemented.
Medium	Implemented	Implemented	one-true-path	tfheen	3	Implemented.
Medium	Deferred	Deferred	openoffice-amd64	tfheen	?	Was: No progressDecision taken to defer this to Dapper+1
Low	Implemented	Implemented	livecd-squashfs	tfheen	?	Implemented.
General			General	Mithrandir		misc: keyboard handling. Korean keyboards almost work out of the box now (I know what the fix is), espresso keyboard handling mostly works (as in, works for me, and Colin fixed a few of my bugs today). XKB is getting there, I'm working a bit with upstream on getting us as good support for languages such as Kurdish. seb's also been excellent helping out here. next week: I'm planning on releasing flight-6 on Wednesday, apart from that, espresso hacking, a bit depending on what Colin has, hopefully get popcon running, move towards bug triage mode rather than development mode. blocked: no
Meeting:						None listed.
mvo						Not present – e-mail update received.
High	Awaiting Deployment	Awaiting Deployment	release-upgrades	mvo	10	It is essentially complete , but we need to continue to track its deployment in production as far as infrastructure. Note from mdz: Please proceed with seeding/promotion/metapackages and then update it to implemented Work continued on this Including some fixes and a local auto-test environment.worked with the lp people on getting the magic into the archive (done). To be completed next week. dist-upgrade tool backportage to breezy is blocked on a soyuz bug (filed)
High	Implemented	Implemented	third-party-packages	mvo	10	Implemented , the problem is we don't really have any that are available in a external repository. updated and added gstreamer desktop files, uploaded new gdebi (mostly cosmetic fixes)
Medium	Implemented	Implemented	unattended-package-upgrades	mvo	3	Implemented.
Medium	Implemented	Implemented	default-apt-sources	mvo	?	Was:- default-apt-sources: * worked on the per-queue-failure code, decided to do something simpler. Spec to be progressed to approved. Now: implemented as described in http://wiki.ubuntu.com/DefaultAptSources (apt/aptitude/synaptic uploaded to dapper)

						<p>Did:- Friday: last day of the I10n sprint (very successful sprint IMHO)</p> <p>- language-selector:</p> <p>* qt port, split package, added fontconfig-vooodoo, added locale specific bits for ja_JP, ko_KR, zh_{CN,TW,HK,SG}</p> <p>- catchup from the sprint for gnome-app-install, synaptic, apt, python-apt, update-manager, software-properties, dist-upgrader</p> <p>- added ttf-sil-(charis, dolous) to universe</p> <p>- evaluated dist-upgrade tool feedback (thing look good so far, but still some missing bits like a bug with debconf/gnome and missing recovery on dpkg failures)</p> <p>- gnome-app-install: improved the menu-data extractor, added some more pseudo dektop files</p> <p>- made hwdb translatable (including the xml in it)</p> <p>- bugtriage, mail backlog</p> <p>Will do:</p> <p>- wait for the auto-dist-upgrade test chroot setup</p> <p>- get the upgrade tool into the archive (finally!)</p> <p>- add the missing bits to the dist-upgrade tool</p> <p>- more bugtriage, catchup</p>
General			General		mvo	
Meeting:						Discussion required between mvo and Kamion re: the debconf/gnome thing,
ogra						
High	Implemented	Implemented	thinclient-faster-startup	ogra	?	Implemented.
Medium	Implemented	Implemented	thin-client-memory-usage	ogra	5	No way to make nbd-server create swap files on the fly before feature freeze, started working on a patch to have it ready for dapper+1, apart from that (and possible improvements through including dash needs more testing for dapper+1) The rest is implemented. to not loose the nbd requirements, i created a new spec: https://wiki.ubuntu.com/FullyAutomaticSwapServer
Medium	Implemented	Implemented	thinclient-sound	ogra / jam	2	Implemented.
Medium	Deferred	Deferred	thinclient-local-devices	ijackson / ogra ?	?	Deferred to Dapper +1.
Medium	Implemented	Implemented	screen-saver	ogra	?	Implemented.
Medium	Implemented	Implemented	screensaver-default-image	ogra	?	Implemented. xscreensaver package work done, jdub wants to do the artwork related stuff . The development is complete but artwork is still pending (due by UI freeze, coordinate with silbs/jdub/etc.)
General			General		ogra	<p>* general: reworked the edubuntu-artwork package completely to not depend on ubuntu-artwork anymore (gains ~5MB on the edubuntu CD), wrote a bunch of Itsp howtos for edubuntu-docs, general poking on screensaver bugs, trying to find out why it sometimes ignores user input, fiddling with the default visual to catch the GL flickering. no work on Itsp-client-builder.udeb yet. some hwdb stuff for mark. fiddled with reding from /dev/vcs3 for Itsp-client-builder.</p> <p>next-week: finishing minor stuff in edubuntu-artwork, continuing the screensaver odd-ysee, Itsp-client-builder.udeb work, flight 6 preparation.</p>
Meeting:						jdub to provide screen-saver artwork.
pitti						
High	Implemented	Implemented	belocs-locales	pitti	2	Implemented.
Medium	Deferred	Deferred	automatic-printer-conf	pitti	2	Was: requires a fair amount of new code and work, I'd rather make cups less buggy than add hal-cups-utils and try to integrate it; it would probably require sb who knows more about gnome than me anyway. Hopefully somebody comes along and gives gnome-cups-manager some love. Now: automatic-printer-conf: no blocks, no time, deferred to dapper+1.
Medium	Implemented	Implemented	gststreamer-audio-backend	pitti	3	Implemented everything on our side; the libgnome audio events issue is still left, but that's an upstream thing .
Medium	Implemented	Implemented	language-pack-vs-support	pitti	?	Implemented.
Medium	Implemented	Implemented	langpacks-desktopfiles	pitti / zyga	5	Implemented. fixed all non-KDE packages which needed manual updating, spec completed; PLAN: discuss the stuff with gnome/fd.o upstream.
Medium	Deferred	Deferred	firewall	pitti	?	Was: long-outstanding bounty proposal; no news from carstenh for quite a while now. Now: deferred to Dapper +1. This is now being discussed between Carsten and Krishna. Now: DONE: almost finished negotiating the bounty with carstenh, with 95% probability this will be deferred to dapper+1; To be delivered by 1 May 2006. DONE: negotiated bounty with carstenh, approved by mdz; target date: May 1st; no blocks any more

General			General		pitti	<p>Reducing-duplication:</p> <ul style="list-style-type: none"> * DONE: got rid of libgd, libmpeg3, gnutls11 (finally!!1!) * PLAN: discuss libsqlite0 demotion with infinity (php5-sqlite is the only package that needs to be changed) * evaluated getting rid of gtk+1.2, but quite many packages still use it, so we have to live with it, unless somebody spends a fair amount of time on that DB2 packaging: <p>* DONE:</p> <ul style="list-style-type: none"> - made myself familiar with the basic installation procedure - dissected the 370 MB tarball into logical chunks suitable for packages - built first round of debs out of it: installation works and produces an usable default instance, so that you can immediately start working <p>* TODO:</p> <ul style="list-style-type: none"> - add proper package descriptions - maybe debconfify (for port configuration and whether to start DAS (administration server)) - integrate DAS startup/shutdown - build a Java SDK deb from the bundled IBM JDK and integrate the GUI stuff to work OOTB - build I10n packages <p>general stuff done this week: security updates, lots of bug triage and fixing, cleaned up anastacia output, espresso testing plan for next week: bugs, bugs, bugs, and more DB2 packaging (depending on how much mdz wants me to work on that) bug backlog: I slowly get it under control, but still a lot to catch up with</p>
Meeting:						
Riddell						
High	Implemented	Implemented	kubuntu-roadmap-dapper	jr	80	Implemented - flight 4 released, new kubuntu-default-settings with a lot of tweaks
High	Implemented	Implemented	simplify-kde	jr	?	Implemented.
High	Approved	Good progress	kubuntu-express	jr	25	Was:aiming to have initial release on Friday Now: Kamion has merged and espresso-frontend-kde released, should now be on the CD
Medium	Approved	Started	kubuntu-documentation	jr	10	Was:documentation seems to be on track for docs freeze next month Now: no update given
Medium	Implemented	Implemented	kubuntu-system-tools	jr	10	Implemented. new guidance with bug fixes tested and uploaded
Medium	Implemented	Implemented	kubuntu-package-manager	jr	20	This spec is is implemented, however the .deb installer part is deferred.
Low	Deferred	Deferred	langpacks-desktopfiles-kde	jr	?	Was: investigated for KDE, looks possible if careful to avoid kconfig/klocale loop. Now: new pending review, likely aim for dapper + 1. Deferred as can not be completed in time for dapper.
Proposed	Deferred	Deferred	kubuntu-launchpad-integration	jr	3	Was: No update given Now: moved target to dapper + 1. Deferred
<p>this week: KDE 3.5.2 packaging and testing also: CD size checking, reviewing knetworkmanager, checking new guidance release next week: 3.5.2 upload if approved, lots of kubuntu espresso, flight 6</p>						
Meeting:						
seb128						
Essential	Implemented	Implemented	gdm-keyboard-layout	seb128		Implemented.

Essential	Approved	Good progress	dapper-desktop-plan	seb128	10	<p>Summary of the changes for it (using https://wiki.ubuntu.com/DapperDesktopPlan):</p> <ul style="list-style-type: none"> * GDM "We are going to:" points are done. To note: - the icons are broken by a gnome-icon-theme change but I've a fix pending after discussion with upstream, I'll upload today. - the language selector has been moved to mvo - "Default System Session" should be renamed because it's not clear enough according to the spec. * network-applet vs. Network Manager: network-manager has not been pushed to the desktop * "Log Out" is not easy enough to find: that change has been made but (happens only for new installations sincethat's user configuration) * The session dialog need to be reworked: the new dialog has been made. It's called from the panel applet. I'll fix the panel menu to have only one item and calling that dialog today. The icon set doesn't match the GNOME one though we need to get new icons for it ... do we have someone working on that? * Workspace switcher: change has been uploaded * battstat applet or gnome-power-manager: that point is about a new icon. * update notifier: that has been done by mvo * "Add to Panel" dialog: The changes have been made out of the new icons for the menu bar and main menu * applets: We assigned bugs we got about that but didn't do a applet by applet review * Top panel icons: The changes have been made. There was some discussions from the documentation team about making yelp discoverable but keeping a panel icon for that is probably not the way to go, launcher are for frequently used launchers, not for something you want to notice on first use only * Workrave It's not a part of the desktop, not sure why it was listed in the spec. The change has not been made but would be easy to do, I can do that today * contact-lookup-applet Same, that's not a part of the desktop but should be easy to fix. <p>Now: GNOME 2.13.92, updated a bunch of GNOME packages to ship a -dbg, session dialog change for "session lock" uploaded, load of bugs triage and fixing.</p>
High	Implemented	Implemented	hide-admin-tools-to-users	seb128	2	Implemented.
High	Implemented	Implemented	menus-revised	seb128	2	Implemented (may adjust some stuff according to users comments though) - I've reactivated the window-properties caplet as discussed
High	Implemented	Implemented	video-playback	seb128	5	Implemented , mail for testing has been send to the ubuntu-devel-announce list (thanks Daniel)
Medium	Implemented	Implemented	faster-gnome-startup	seb128	3	Implemented (new fontconfig with mmap cache mentionned as an option is still being worked upstream so probably not for dapper, GTK icon cache specification has issues will be sorted for Debian but probably not for dapper neither, others points are done and work correctly)
Medium	Deferred	Deferred	rhythmbox-ipod	seb128	5	Was: gstreamer0.10: updated rhythmbox. Now: gstreamer0.10: desktop and seeds updated for gst0.10, gst0.8 can be demoted to universe. This goal is low priority, will probably not happen for dapper, too many stuff to do, upstream didn't work on it, and I will probably not manage to free a week or so to code on that. Deferred.
General			General	seb128		<p>this week: bug day (some people active on IRC participated, which is nice but we lacked participation of some distro team people though), some GNOMish updated, replied to comments and triaged a pile of desktop bug, forwarded a bunch of them upstream, debugged some of them, patches a bunch of packages (desktop issues fixing)</p> <p>next week: bug triage, forwarding, squashing, patching.</p>
Meeting:						None listed.
sivan						
Medium	Approved	Started	home-user-backup	sivan	10	<p>Was: had some good progress the last week, I can see the end now, approxmt. in one week from now or less. backend are are ready, including burn and isobuilding, all left is glade and PyGTK UI hacking to finish. (including support for multisession for differential backups) (a package will get uploaded soon to universe , so you could see where this is going) Now: HomeUserBackup is very close to finishing now (approx 2-3 days away if my gf let me work during the weekend) this will include backing up to CD, and restoring</p>
General			General	sivan		Note from sivan I need someone responsive to review and sponser the upload :) I'd like to go under review of someone from distro team for that matter since it's going to be new software and etc
Meeting:						None listed.
