Ubuntu DeskTop Linux OS

Testing Result

Ubuntu Desktop Linux V5.04 was tested by Open Source Testing Lab of Beijing Software Quality Testing Center during during July 11th to 22nd. The test followed the national standard "GB/T 16260-1996, Information Technology, Software Products Assessment, Quality Characteristics and Usage Guideline" and "GB/T 17544-1998, Information Technology, Software Package, Quality Requirements and Testing". The testing covered user documentation, functionality, reliability, usability, portability, maintainability, performance, Chinese characteristics. The testing result is summerized as below.

- 1. User documentation: The user manuals provides detailed information which is correct, complete and consistent with the software. It is easy to browse and understand.
 - 2. Functionality
 - 1) Installation: The tested system implements the functions of installing from CD and from hard disk. It provides friendly easy-to-use GUI interface. However, the whole installation process is not perfect.
 - 2) Startup and logout: The system implements the functions of startup and logout correctly.
 - 3) Control Panel: The system implements the following configuration functions: Networking, CD Database Server, Theme, Sessions, Desktop Background, Font, File Management, Keyboard, Keyboard Shortcut, Mebu& Toolbars, Mouse, Multimedia Systems Selector, Network Proxy, PalmOS Devices, Preferred Applications, Remote Desktop, Removable Drives and Media, Screen Resolution, Windows, etc. It also implements Device Manager, Login Screen Setup, Printing, Shared folders, Synaptic Package Manager, Time and Date, Update Manager, User and Group, System Monitor, etc.
 - 4) Main interface: Ubuntu adopts GNOME Desktop, which has easy-setting environment, strong usability and powerful functionality. Compared with other Linux of Chinese versions, Ubunt's interface is more clear and user-friendly. The system implements the functions of setting Startup menu, using Desktop and setting Panel.
 - 5) Resource Manager: The system implements the functions of file operations, editing, background and icon management, viewing, jumping to other places, edit bookmarks, browse help, it also basically implements the function of setting preferences.

(Next Page)

Page 2 Total 106

(Following last page)

- 6) Network Neighboughs: Ubuntu can access shared files and devices in Liunx and Windows machines, but Windows machine can not access the shared resources in UbentuLinux. The system implements Telnet, Ping, Access/Read/Write, neighbough listing, network mapping, and device sharing, it also basically implements network configuration during installation, SMB function, system access, computer searching, network printing and access different file systems.
- 7) The frequently-used commands: The system implements the following frequently used commands: user management, network management, backup/compression, rpm package management and process management. It basically implements file/folder operation commands.
- 8) Applications: The pre-installed software in the system consist of all kinds of desktop applications and can be used for the frequetly used desktop tasks.
- **Ø** Internet: The systems implements the functions of chattting and downloading. The system basically implements Evolution email and browser functions.
- **Ø** OA: The system implements OpenOffice Predentation OpenOffice Spreadsheet OpenOffice Word Processor OpenOffice Style, and OpenOffice Drawing (basically).
- **Ø** Graphics: The system implements GIMP Image Editor, PostScript Viewer, Image Viewer, it basically implements gThumb Image Viewer.
- **Ø** Sound and Video: The system implmentsTotem Movie Player, CD Ripper, and Volume Control, it also basically implements CD Player, Sound Recorder, and Music Player.
- Systems tools: The system implements New Login, Network tools, , Terminal, and Configuration Editor.
- **Ø** Accessories: The system implements Dictionary, Character Map, Caculator, it also basically implements Text Editor and Archive Manager.
- 9) Application software integration: The system implements clipper borad, the integration between applications and system fonts, application startup correctly, it also basically implements the integration between application and print management, and integration among applications.

(Next Page)

Page 3 Total 106

(Following last page)

- 3. Reliability: During the testing process, the system runs smoothly. It has certain fault-tolerance and recovering ability. The system provides indication infromation for invalid inputs. It also data backup mechanism. The system is fairly secure. The defaul setting does not permit to log in as root user, to avoid system damage by accidental operations. User verification is required for critical system setting.
- 4. Usability: It is easy to browse and understand information in the system. The system basically support the operations of mouse and keyboard, and is fairly easy to use. There is one flaw in the system that there is no confirmation indication for critical edit operations.
- 5. Maintainability: The system can estimate the runtime errors, defects, and the corresponding reasons, and provide analysis indictions. The system provides convenient methods to change the configuration files. Plug-in interfaces are available in the system. Development environment can be installed in the system.
- 6. Portability: The system supports many kinds of digital cameras, printers, and USB flash disks from different vendors. Compared with other Linux systems, the plugging-recognizing speed is faster. Refer to Table 6 in the Report for the detailed result.
- 7. Performance: Refer to Table 7 in the test report for the results of system timing, resource and network performance.
- 8. Chinese charactastics: The system can display Chinese characters basically correctly. However, the system is not localized completely, there are still some English mixed with Chinese in some user interfaces. The system supports Character Set GB 2312, GB 13000.1 partially and does not support GB18030.

NOTE: Particular testing result see test content

Please see the defect report if the testing result is Pass or Fail

3. Reliability

Table 3 Reliabili	ty	Page1	Total 1
Requirement	Testing Procedure Description		Result
	Software exception will not make the system invalid		Pass
	The system neither break down nor lose data when user unlawful commands regulated definitely in user docume	•	Pass
Maturity	Software or data will not be destroyed by power cut, exit, network exception interrupt and etc.	exception	Pass
	System resource are used with reason and no memory le	Pass	
Fault tolerance	Screen char or action which perhaps results in deadly error or system fault. Show prompt to improper operation and prompt correctly.		Pass
tolerance	Timely prompt should be showed if system exception happen due to exterior reason, such as IP collision and DNS change		Pass
Convenient for restoring	When the system break down,it should be able to rebuild quickly and record core detailed information. Thus system administrator may analyze and look for error		Pass
Data integrality	If lawless data is input, show succinct and exact prompt information in Chinese. show help information when necessary		Pass
Data backup and restore	Support backuping and restoring data,backuping is c there are multifold backuping method	onvenient and	Pass

Page 67 Total 106

4. Usability

Table 4 Usability Pa		Page1	Total 1
Requirement	Testing Procedure Description		Result
Convenient for understanding	Helping users understand and operate by proper graphics ,background information and help	term,	Pass
	Prompt the cause that result in error and how to correct it in error message		Pass
Convenient for browsing	Provide necessary information for directing current run-time status of program		Pass
	Screen prompt,input and output is designed nor and pellucid	rmatively	Pass
Convenient for operating	Manipulation which may cause serious aftereffed undone ,or sound a warning and require a affirmate executing.		Fail
	Provide accessorial input method such as standby value and default value		Pass
	Manipulate easily and support standard mouse,ke shortcut key	eyboard and	Pass

5. Maintenance

Table 5 Maintenance			Total 1
Requirement	Testing Procedure Description		Result
Convenient for analyzing	Show a analysis clew when bug or invalidation take places		Pass
Convenient for altering	Be able to modify values of the corresponding configuration files, libraby and table expediently		Pass
	Support Plug-in interface, be able to add right button menu item and shortcut for software		Pass
	Be able to install development envirement		Pass
